

Baltimore City Public Schools 2016-17 School Survey Results Summary

Research has shown that school climate has a significant impact on student outcomes; six aspects of climate (highlighted below) are particularly influential. In Baltimore City Schools, students' sense of belonging, safety and mutual respect are linked to lower chronic absence rates and higher pass rates on state tests. Additionally, when City Schools' staff like the classes they teach, schools are more likely to have higher attendance, lower chronic absence and higher pass rates on state tests. Below are the results of the annual school survey for students and staff from the 2016-17 school year. It was the last year the survey was given by City Schools because the Maryland State Department of Education planned to begin a statewide climate survey in the 2017-18 school year. The state's survey didn't start until the 2018-19 school year. Results from the 2018-19 survey are expected to be released by MSDE in the fall of 2019.

NOTE: This report presents results for your school and the average for schools of the same type as yours – high, middle/high, middle, elementary/middle, or elementary, depending on your school's grade configuration. Response rates are not calculated for parents as the total number of parents at each school is unknown. In cases where there are score ties for items with highest/lowest satisfaction, the first score in that tie was generally selected for this report. Review your school's item-level report to see all items on the survey. N/A appears if data are not available for a stakeholder group. #N/A indicates that school type average information is not available when a school's data have been suppressed. Data were suppressed if there were 5 or fewer respondents in a given category and if the response rate was less than 30%.
